## Journal Citation Indicator (JCI)

**0.35**

The Journal Citation Indicator (JCI) is the average Category Normalized Citation Impact (CNCI) of citable items (articles & book reviews) published by a journal over a recent three year period. The average JCI in a category is 1. Journals with a JCI of 1.5 have 50% more citations than the average in that category. It may be used alongside other metrics to help you evaluate journals. ## Total Citations

**474**

[Export](#)

The total number of times that a journal has been cited by all journals included in the database in the JCR year. Citations for JCR are compiled annually from the JCR years combined database, regardless of which JCR edition lists the journal.

## Open Access (OA)

[Export](#)

The data included in this tile summarizes the items published in the journal in the JCR data year and in the previous two years. For example, in the 2020 JCR data, released in June 2021, the Open Access (OA) data show the publication model (Gold OA or Hybrid OA) for all materials published in 2018, 2019 and 2020, and citations in 2020 to these items. This three-year set of published items is used for a descriptive analysis of the content and community of the journal. [Learn more](#)

# Rank by Journal Citation Indicator (JCI)

Journals within a category are sorted in descending order by Journal Citation Indicator (JCI) resulting in the Category Rank. A separate rank is shown for each category in which the journal is listed in JCR. Data for the most recent year is presented in the first row of the list, with other years shown in reverse chronological order. [Learn more](#)
